

PATHLY

Your Personalised Path to Learning & Growth

3MTT NextGen Knowledge Showcase | Education Pillar | March 2026

1. Problem

Nigeria has over 50 million students across primary, secondary, and tertiary levels — yet the vast majority learn from a single, one-size-fits-all approach. A university student and a JSS2 student studying the same topic get the exact same content, at the same pace, with no adjustment for what they already know or how fast they learn.

Beyond academics, millions of young Nigerians are trying to acquire tech and life skills — graphic design, coding, public speaking, financial literacy — but have no structured, personalised guide to help them progress at their own pace.

The result:

- Students fall behind and never catch up because learning isn't adapted to them
 - Bright students are bored because content moves too slowly
 - Self-learners waste time on scattered, unstructured resources
 - No affordable, accessible platform in Nigeria adapts to the individual learner
-

2. Users

Pathly serves four distinct user groups:

Primary School Students (Ages 6–12)

- Struggle with foundational literacy and numeracy
- Need visual, interactive, simplified learning paths
- Parents want progress visibility

Secondary School Students (Ages 12–18)

- Preparing for WAEC, NECO, and JAMB
- Need targeted subject revision based on weak areas
- High demand for past questions and exam simulations

University Students

- Managing large course loads with limited lecturer support
- Need course-specific study paths aligned to their department

- Benefit from AI-generated summaries and concept breakdowns

Skill Learners (All Ages)

- Young Nigerians learning tech skills: coding, design, data
 - Adults building life skills: financial literacy, communication
 - No prior formal training — need beginner-friendly, structured paths
-

3. Build

Pathly is a full-stack Flutter web application with an AI-powered personalisation engine at its core, built and deployed as a working product.

How It Works

- User signs up and selects their level (Primary / Secondary / University / Skills & Career)
- They take a short diagnostic quiz (5–8 questions) tailored to their chosen level
- The AI analyses results, identifies weak topics, and generates a personalised study path
- The path is broken into modules and lessons with type, duration, and unlock progression
- A progress dashboard tracks mastery, streaks, and recommended next steps
- All data is persisted per user via Supabase — progress survives sessions

Key Features (Live MVP)

- AI Diagnostic Engine — identifies knowledge gaps on signup
- Adaptive Learning Paths — personalised curriculum per user generated by AI
- Level Coverage — Primary, Secondary, University, and Skills & Career
- Progress Dashboard — mastery rings, streak tracking, module progress cards
- User Authentication — secure signup, login, password reset via Supabase Auth
- Persistent Backend — all paths, diagnostics, streaks saved per user in Supabase
- Web Deployed — live at kirasa.netlify.app, accessible from any device

Tech Stack

- Frontend: Flutter (web + mobile)
- State Management: Riverpod
- Navigation: GoRouter
- Backend & Auth: Supabase (PostgreSQL + Row Level Security)
- AI: Groq API (Llama 3) for study path generation and personalisation
- Deployment: Netlify (auto-deploy from GitHub)

AI/Tool Disclosure: Pathly uses the Groq API (Llama 3) to power its adaptive learning engine, generate personalised study paths, and provide AI-assisted explanations to students. Claude (Anthropic) was used as a development assistant during the build process.

4. Impact

Pathly directly addresses one of Nigeria's most persistent challenges: educational inequality driven by a rigid, non-adaptive learning system.

- Students who previously fell behind due to one-size-fits-all teaching now get a learning path built just for them
- WAEC/JAMB candidates can identify and close specific weak areas before their exams — not after failing
- Young Nigerians without access to expensive tutors get a free, intelligent alternative
- Skill learners gain structured, progressive paths that take them from zero to job-ready

Estimated impact within 12 months of launch:

- 10,000+ active learners across Nigeria
 - 30% improvement in diagnostic scores for consistent users (based on similar edtech benchmarks)
 - Reduced dependency on expensive private tutoring for secondary school exam prep
-

5. Scalability

Pathly is built to scale across Nigeria and across Africa. The core technology — an AI personalisation engine — is inherently scalable. Every new subject, skill, or language added multiplies reach without proportional cost increase.

Phase 1 — MVP (Now)

- Live Flutter web app covering all four learning levels
- AI-powered diagnostic and personalised path generation via Groq
- Free for all users, deployed at kirasa.netlify.app

Phase 2 — Growth (6–12 months)

- Android app release (Android-first for Nigerian market)
- Offline mode for low-connectivity areas
- Expand to full NERDC curriculum (primary through university)
- Teacher and parent dashboard for classroom and home monitoring

Phase 3 — Scale (12–24 months)

- Expand to other African countries with localised curricula (Ghana, Kenya, Rwanda)
 - B2B offering for schools and corporate training
 - Freemium model with premium plans for advanced features
 - Partnerships with NERDC, JAMB, and state education ministries
-

Every learner deserves a path built for them. Pathly makes that possible.
